

Methodological and analytical workflow

NHANES 2017-2018 alcohol-use and sleep analysis

NHANES 2017-2018 component files merged by SEQN
Adults aged 18 years or older (n = 5,856)

Complex survey design specified
Positive MEC weight, strata, and primary sampling units (n = 5,533)

Exposure, sleep outcomes, and covariates constructed
Nonmissing primary outcome after weight restriction (n = 5,529)

Primary survey-weighted logistic regression
Sequential Models 0-4; n = 4,072 to 3,109

Secondary sleep outcomes and sleep-duration model
Fully adjusted survey-weighted analyses

Dose-response, sensitivity, and alcohol-pattern-by-sex
interaction analyses

Pairwise-complete Spearman correlations
Unweighted exploratory analysis
